Biochemistry 30, 7180-7185, 1991
A;Title: Amino acid sequence of nitrite reductase: a copper protein from Achromobacter
A;Reference number: A37260; MUID:91308101; PMID:1830217
A;Accession: A37260

A;Status: preliminary
A;Molecule type: protein
A;Residues: 39-378 <FEN>
C;Comment: This enzyme is a copper-containing
it reduces nitrite ion to nitric oxide, and it

Comment: This enzyme is a copper-containing enzyme. It is involved in the alternative reduces nitrite ion to nitric oxide, and it receives electrons from the blue copper Genetics:

Gene: nir

C;Keywords: copper; electron transfer; oxidoreductase
F;1-38/Domain: signal sequence #status predicted <SIG>
F;39-378/Product: nitrite reductase #status predicted <MAT>

Query Match

nitrite reductase (EC 1.7.99.3) blue copper-containing - Achromobacter xylosoxid N,Alternate names: NiR
C;Species: Achromobacter xylosoxidans
C;Date: 21-Aug-1998 #sequence_revision 21-Aug-1998 #text_change 07-May-1999
C;Accession: JE0215
R;Vandenberghe, I.H.M.; Meyer, T.E.; Cusanovich, M.A.; Van Beeumen, J.J.
Biochem. Biophys. Res. Commun. 247, 734-740, 1998
A;Title: The covalent structure of the blue copper-containing nitrite reductase A;Reference number: JE0215; MUID:98321197; PMID:9647763
A;Accession: JE0215
A;Molecule type: protein
A;Residues: 1-336 <VAN.
A;Residues: 1-336 <VAN.
A;Residues: 1-336 <VAN.
C;Keywoqds: oxidoreductase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁

S52253
copper resistance protein pcoA precursor - Escherichia coli plasmid pRJ1004
N;Alternate names: copper-binding protein
C;Species: Escherichia coli
C;Species: Escherichia coli
C;Oate: 07-May-1995 #sequence revision 21-Jul-1995 #text_change 11-Jun-1999
C;Accession: $70159; $52253
C;Accession: $70159; $52253
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A;Experimental source: serogroup A, strain Z2491
C;Genetics:
A;Gene: NMA0919; NMA0925
C;Superfamily: T. aquaticus cytochrome c552; cytochrome c6 homology

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A;Title: Thermus thermophilus cytochrome-c552: a new highly thermostable cytochrome-c A;Reference number: A59160; MUID:9742833; PMID:9281430
A;Contents: annotation; X-ray crystallography, 1.28 angstroms
C;Comment: This cytochrome appears to function as an electron donor to cytochrome oxid C;Superfamily: T. aquaticus cytochrome c552; cytochrome c6 homology
C;Keywords: chromoprotein; electron transfer; heme; iron; metalloprotein; pyroglutamic C;Ceywords: chromoprotein; electron transfer; heme; iron; metalloprotein; pyroglutamic P;2-87/Domain: cytochrome c6 homology cCT69
F;11/Modified site: pyrrolidone carboxylic acid (Gln) #status experimental
F;11,14/Binding site: heme (Cys) (covalent) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Residues: 1-131 <TIT>
